

Explanatory Notes

All cases (locked and unlocked) taken to theatre between 01 June 2024 and 31 August 2024 have been included. Only cases where the necessary data are available have been included in the denominator for each individual analysis.

At hospital level, runcharts are compared to hospitals within the same ICB.

The results for process measures for which fewer than 10 cases have available data will not be reported. Instead the value will be marked as 'Insufficient data'.

The NELA standards include a newly updated composite standard for CT Scanning and Reporting. The new standard is composed of three metrics: (1) the proportion of patients who had a CT scan that was reported by senior radiologist (ST3+), (2) the proportion of those reported within an hour or less of the scan, and (3) the proportion of those communicated preoperatively between a senior radiologist (ST3+) and senior surgeon (ST3+) to discuss the CT findings.

NOTE: due to changes in database structure, time related metrics may be calculated even if a time (NOT date) stamp is not entered. When time is entered as "00:00" and the "Time not known" box is not ticked, this time-stamp will be used for the standard calculation and may negatively affect reported metrics. We would therefore request that every effort is made to enter the time-stamps for the following variables:

- Date and Time of admission to hospital (Q1.9),
- Date and time of CT scan (Q2.7d),
- Date and time CT scan was reported (Q2.7e),
- Date and time of first dose of antibiotics (Q2.10),
- Date and time arrival in theatre (Q4.1).

For better insight to how these standards have been structured, please refer to the **NELA standards document**.

Hospital performance: Risk-adjusted measures
Rating boundaries are lower and upper 99.8% and 95% control limits

Hospital performance: Non-risk-adjusted measures
Rating boundaries are lower and upper national quartiles

Lincoln County Hospital

2024-25 Reporting Period 2: 01 June 2024 - 31 August 2024

These plots represent patients having an emergency laparotomy during Year 2024-25 Reporting Period 2 of NELA data collection. This version will be made publicly available via the NELA website. Feedback from participating hospitals is welcome.

NELA process and outcome measures

Estimated case ascertainment
01 June 2024 - 31 August 2024

**Estimated case ascertainment
(Based on HES/PEDW Data)**

Expected number of cases 42
Total cases entered 31
Cases locked 28
Cases unlocked 3

Proportion of patients who had a CT scan that was reported by a senior radiologist (ST3+) and communicated with the team in the correct time scale before surgery
01 June 2024 - 31 August 2024

CT reported by a senior radiologist (ST3+) and communicated with the team in the correct time scale before surgery.

National mean 12%
ICB mean 7%
Number of patients included 24
Data completeness 93%

Proportion of patients with suspected sepsis or infection that have antibiotic administration within the correct clinical timeframe
01 June 2024 - 31 August 2024

Combined Infection management standard - antibiotic administration within the correct clinical timeframe

National mean 23%
ICB mean 12%
Number of patients included 9
Data completeness 75%

Septic Shock - antibiotic administration within the correct clinical timeframe

National mean 22%
ICB mean NaN%
Number of patients included 0
Data completeness 0%

Sepsis - antibiotic administration within the correct clinical timeframe

National mean 20%
ICB mean 0%
Number of patients included 1
Data completeness 25%

Infection - antibiotic administration within the correct clinical timeframe

National mean 35%
ICB mean 18%
Number of patients included 9
Data completeness 75%

Non-elective, immediate surgery cases, arriving in theatre within 6 hours.

National mean 8%
ICB mean 2%
Number of patients included 23
Data completeness 100%

Risk documented before surgery

National mean 69%
ICB mean 53%
Number of patients included 31
Data completeness 100%

Risk documented after surgery

National mean 52%
ICB mean 38%
Number of patients included 31
Data completeness 100%

**Admitted to Critical Care
(risk of death \geq 5%)**

National mean 54%
ICB mean 61%
Number of patients included 16
Data completeness 100%

**Consultant Anaesthetist &
Consultant Surgeon in theatre
(risk of death \geq 5%)**

National mean 71%
ICB mean 78%
Number of patients included 19
Data completeness 63%

Perioperative Assessment by a member of the geriatrician-led multidisciplinary team for patient aged 65 or over and frail (CFS ≥ 5) or 80+

National mean 28%
ICB mean 0%
Number of patients included 4
Data completeness 57%

Median postoperative length of stay

National median 10 days
ICB median 10 days
Number of patients included 25
Data completeness 100%

Mean postoperative length of stay

National mean 15 days
ICB mean 16 days
Number of patients included 25
Data completeness 100%

Integrated Care Board

Lincoln County Hospital is part of the NHS Lincolnshire Integrated Care Board ICB. This comprises Lincoln County Hospital, Pilgrim Hospital.
