

Explanatory Notes

All cases (locked and unlocked) admitted to hospital between 01 September 2025 and 30 November 2025 have been included. Only cases where the necessary data are available have been included in the denominator for each individual analysis.

At hospital level, runcharts are compared to hospitals within the same ICB.

The results for process measures for which fewer than 10 cases have available data will not be reported. Instead the value will be marked as 'Insufficient data'.

Mortality

This section defines three key mortality measures for the monthly report. In all cases we include only patients whose surgery-to-discharge interval (Q4.1 - Q7.8) is ≤ 30 days, and we exclude any with missing discharge status (Q7.7) or missing dates (Q4.1/Q7.8).

1. 30-Day Observed (Crude) Mortality Rate

Let

- d = number of patients who **died** within 30 days of surgery,
- N = total number of patients with known discharge status (alive, died, or still in hospital at 60 days).

Then the crude 30-day mortality rate (as a percentage) is

$$\text{Crude 30-day Mortality Rate} = \frac{d}{N} \times 100.$$

2. Standardised Mortality Ratio (SMR)

Let

- $O = d$ = observed deaths within 30 days,
- $E = \sum_i \text{RiskScore}_i$ = sum of individual parsimonious NELA mortality risk scores for all N patients.

The SMR is

$$\text{SMR} = \frac{O}{E}.$$

3. Risk-Adjusted Mortality

Combines the SMR with the **National** 30-day mortality rate for the examined three month period:

$$\text{Risk-Adjusted Mortality} = \text{SMR} \times (\text{National 30-day mortality}) \times 100.$$

For better insight to how these standards have been structured, please refer to the **NELA standards document**.

Quarterly mean performance

Overall performance

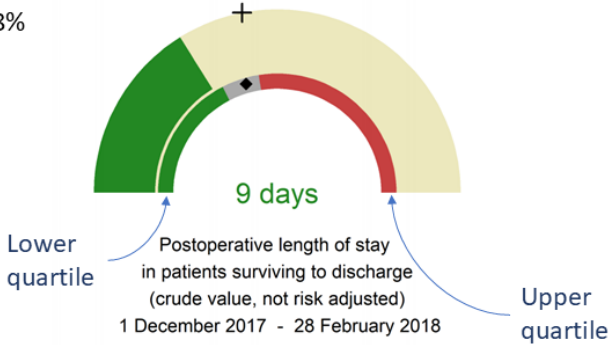

Risk-adjusted mortality

Rating boundaries are lower and upper 99.8% and 95% confidence limits

Non-risk-adjusted measures

Rating boundaries are lower and upper national quartiles

Queen Elizabeth Hospital Birmingham

2025-26 Reporting Period 8: 01 September 2025 - 30 November 2025

These plots represent patients having an emergency laparotomy during Year 2025-26 Reporting Period 8 of NELA data collection. This version will be made publicly available via the NELA website. Feedback from participating hospitals is welcome.

NELA process and outcome measures

Estimated case ascertainment
01 September 2025 - 30 November 2025

**Estimated case ascertainment
(Based on HES/PEDW Data)**

Expected number of cases 64
Total cases entered 71
Cases locked 61
Cases unlocked 10

Proportion of patients who had a CT scan that was reported by a senior radiologist (ST3+) and communicated with the team in the correct time scale before surgery
01 September 2025 - 30 November 2025

CT reported by a senior radiologist (ST3+) and communicated with the team in the correct time scale before surgery.

National mean 12%
ICB mean 9%
Number of patients included 58
Data completeness 99%

Proportion of patients with suspected sepsis or infection that have antibiotic administration within the correct clinical timeframe
01 September 2025 - 30 November 2025

Combined Infection management standard - antibiotic administration within the correct clinical timeframe

National mean 20%
ICB mean 32%
Number of patients included 35
Data completeness 95%

Sepsis/septic shock - antibiotic administration within the correct clinical timeframe

National mean 12%
ICB mean 14%
Number of patients included 26
Data completeness 93%

Infection - antibiotic administration within the correct clinical timeframe

National mean 27%
ICB mean 50%
Number of patients included 9
Data completeness 24%

Non-elective, immediate surgery cases, arriving in theatre within 6 hours.

National mean 10%
ICB mean 3%
Number of patients included 35
Data completeness 100%

Risk documented before surgery

National mean 74%
ICB mean 84%
Number of patients included 71
Data completeness 100%

Risk of death documented after surgery
01 September 2025 - 30 November 2025

Risk documented after surgery

National mean 54%
ICB mean 77%
Number of patients included 71
Data completeness 100%

Admitted to critical care following surgery when the risk of death ≥ 5% (Excludes patients who died in theatre or with a decision to palliate)
01 September 2025 - 30 November 2025

Admitted to Critical Care (risk of death ≥ 5%)

National mean 62%
ICB mean 56%
Number of patients included 40
Data completeness 100%

Consultant surgeon and anaesthetist present in theatre when risk of death ≥ 5%
01 September 2025 - 30 November 2025

Consultant Anaesthetist & Consultant Surgeon in theatre (risk of death ≥ 5%)

National mean 79%
ICB mean 86%
Number of patients included 44
Data completeness 79%

Perioperative assessment by a care of the older person specialist
01 September 2025 - 30 November 2025

Perioperative Assessment by a member of the geriatrician-led multidisciplinary team for patient aged 65 or over and frail (CFS ≥ 5) or 80+

National mean 33%
ICB mean 34%
Number of patients included 18
Data completeness 95%

Median postoperative length of stay

National median 11 days
ICB median 13 days
Number of patients included 51
Data completeness 96%

Mean postoperative length of stay

National mean 15 days
ICB mean 18 days
Number of patients included 51
Data completeness 96%

Risk-Adjusted Mortality

Number of patients included 66 | 30-day risk-adjusted mortality rate 10.6% | National 30-day mortality rate 7.8%

Integrated Care Board

Queen Elizabeth Hospital Birmingham is part of the NHS Birmingham And Solihull Integrated Care Board ICB. This comprises Birmingham Heartlands Hospital, Good Hope Hospital, Queen Elizabeth Hospital Birmingham.
