

Explanatory Notes

All cases (locked and unlocked) admitted to hospital between 01 April 2025 and 30 June 2025 have been included. Only cases where the necessary data are available have been included in the denominator for each individual analysis.

At hospital level, runcharts are compared to hospitals within the same ICB.

The results for process measures for which fewer than 10 cases have available data will not be reported. Instead the value will be marked as 'Insufficient data'.

Mortality

This section defines three key mortality measures for the monthly report. In all cases we include only patients whose surgery-to-discharge interval (Q4.1 - Q7.8) is ≤ 30 days, and we exclude any with missing discharge status (Q7.7) or missing dates (Q4.1/Q7.8).

1. 30-Day Observed (Crude) Mortality Rate

Let

- d = number of patients who **died** within 30 days of surgery,
- N = total number of patients with known discharge status (alive, died, or still in hospital at 60 days).

Then the crude 30-day mortality rate (as a percentage) is

$$\text{Crude 30-day Mortality Rate} = \frac{d}{N} \times 100.$$

2. Standardised Mortality Ratio (SMR)

Let

- $O = d$ = observed deaths within 30 days,
- $E = \sum_i \text{RiskScore}_i$ = sum of individual parsimonious NELA mortality risk scores for all N patients.

The SMR is

$$\text{SMR} = \frac{O}{E}.$$

3. Risk-Adjusted Mortality

Combines the SMR with the **National** 30-day mortality rate for the examined three month period:

$$\text{Risk-Adjusted Mortality} = \text{SMR} \times (\text{National 30-day mortality}) \times 100.$$

For better insight to how these standards have been structured, please refer to the **NELA standards document**.

Quarterly mean performance

Overall performance

Risk-adjusted mortality

Rating boundaries are lower and upper 99.8% and 95% confidence limits

Non-risk-adjusted measures

Rating boundaries are lower and upper national quartiles

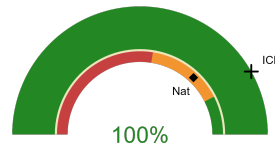

York Hospital

2025-26 Reporting Period 3: 01 April 2025 - 30 June 2025

These plots represent patients having an emergency laparotomy during Year 2025-26 Reporting Period 3 of NELA data collection. This version will be made publicly available via the NELA website. Feedback from participating hospitals is welcome.

NELA process and outcome measures

Estimated case ascertainment
01 April 2025 - 30 June 2025

**Estimated case ascertainment
(Based on HES/PEDW Data)**

Expected number of cases 50
Total cases entered 61
Cases locked 35
Cases unlocked 26

Proportion of patients who had a CT scan that was reported by a senior radiologist (ST3+) and communicated with the team in the correct time scale before surgery
01 April 2025 - 30 June 2025

CT reported by a senior radiologist (ST3+) and communicated with the team in the correct time scale before surgery.

National mean 12%
ICB mean 7%
Number of patients included 35
Data completeness 98%

Proportion of patients with suspected sepsis or infection that have antibiotic administration within the correct clinical timeframe
01 April 2025 - 30 June 2025

Combined Infection management standard - antibiotic administration within the correct clinical timeframe

National mean 23%
ICB mean 33%
Number of patients included 24
Data completeness 80%

Sepsis/septic shock - antibiotic administration within the correct clinical timeframe

National mean 12%
ICB mean 8%
Number of patients included 4
Data completeness 40%

Infection - antibiotic administration within the correct clinical timeframe

National mean 34%
ICB mean 44%
Number of patients included 20
Data completeness 67%

Non-elective, immediate surgery cases, arriving in theatre within 6 hours.

National mean 12%
ICB mean 8%
Number of patients included 34
Data completeness 100%

Risk documented before surgery

National mean 73%
ICB mean 76%
Number of patients included 61
Data completeness 100%

Risk of death documented after surgery
01 April 2025 - 30 June 2025

Risk documented after surgery

National mean 53%
ICB mean 58%
Number of patients included 61
Data completeness 100%

Admitted to critical care following surgery when the risk of death ≥ 5% (Excludes patients who died in theatre or with a decision to palliate)
01 April 2025 - 30 June 2025

Admitted to Critical Care (risk of death ≥ 5%)

National mean 58%
ICB mean 72%
Number of patients included 38
Data completeness 100%

Consultant surgeon and anaesthetist present in theatre when risk of death ≥ 5%
01 April 2025 - 30 June 2025

Consultant Anaesthetist & Consultant Surgeon in theatre (risk of death ≥ 5%)

National mean 72%
ICB mean 75%
Number of patients included 36
Data completeness 77%

Perioperative assessment by a care of the older person specialist
01 April 2025 - 30 June 2025

Perioperative Assessment by a member of the geriatrician-led multidisciplinary team for patient aged 65 or over and frail (CFS ≥ 5) or 80+

National mean 28%
ICB mean 7%
Number of patients included 22
Data completeness 92%

Median postoperative length of stay

National median 10 days
ICB median 15 days
Number of patients included 58
Data completeness 100%

Mean postoperative length of stay

National mean 14 days
ICB mean 19 days
Number of patients included 58
Data completeness 100%

Risk-Adjusted Mortality

Integrated Care Board

York Hospital is part of the NHS Humber And North Yorkshire Integrated Care Board ICB. This comprises Harrogate District Hospital, Hull Royal Infirmary, Castle Hill Hospital, York Hospital, Scarborough Hospital, Diana Princess of Wales Hospital, Scunthorpe General Hospital.
