NELA National Emergency Laparotomy Audit

Monthly Report

Explanatory Notes

All cases (locked and unlocked) admitted to hospital between 01 December 2025 and 28 Februrary 2026 have been included. Only cases where the necessary data are available have been included in the denominator for each individual analysis.

At hospital level, runcharts are compared to hospitals within the same ICB.

The results for process measures for which fewer than 10 cases have available data will not be reported. Instead the value will be marked as 'Insufficient data'.

Mortality

This section defines three key mortality measures for the monthly report. In all cases we include only patients whose surgery-to-discharge interval (Q4.1 - Q7.8) is ≤ 30 days, and we exclude any with missing discharge status (Q7.7) or missing dates (Q4.1/Q7.8).

1. 30-Day Observed (Crude) Mortality Rate

Let
- $d =$ number of patients who **died** within 30 days of surgery,
- $N =$ total number of patients with known discharge status (alive, died, or still in hospital at 60 days).

Then the crude 30-day mortality rate (as a percentage) is

$$\text{Crude } 30\text{-day Mortality Rate} = \frac{d}{N} \times 100.$$

2. Standardised Mortality Ratio (SMR)

Let
- $O = d$ = observed deaths within 30 days,
- $E = \sum_i \text{RiskScore}_i$ = sum of individual parsimonious NELA mortality risk scores for all N patients.

The SMR is

$$\text{SMR} = \frac{O}{E}.$$

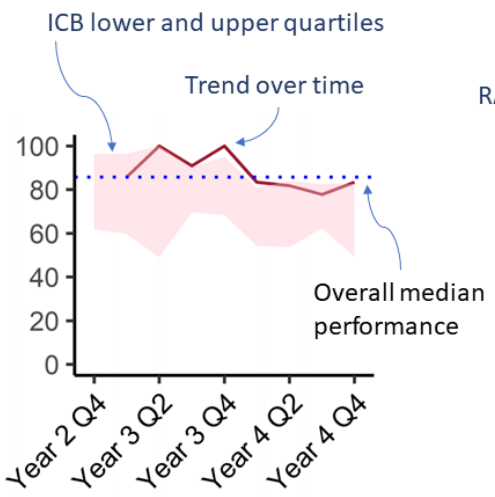
3. Risk-Adjusted Mortality

Combines the SMR with the **National** 30-day mortality rate for the examined three month period:

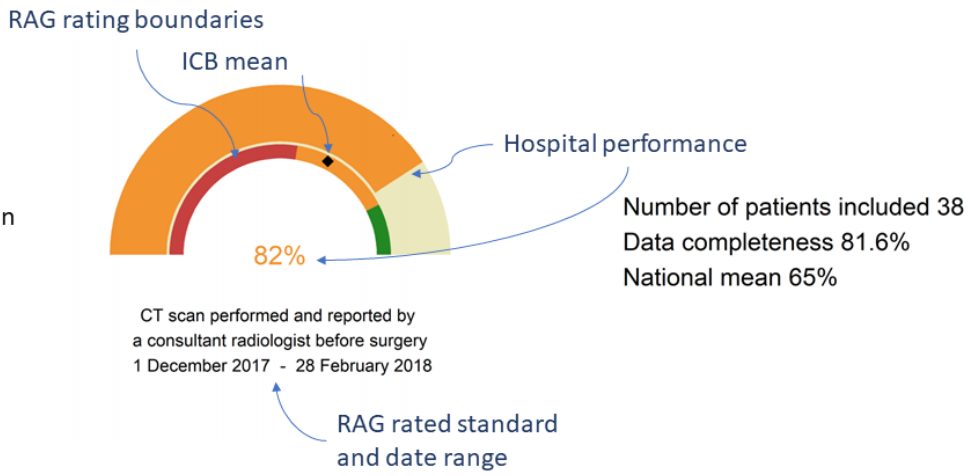
$$\text{Risk-Adjusted Mortality} = \text{SMR} \times \big(\text{National 30-day mortality}\big) \times 100.$$

For better insight to how these standards have been structured, please refer to the **NELA standards document.**

Quarterly mean performance

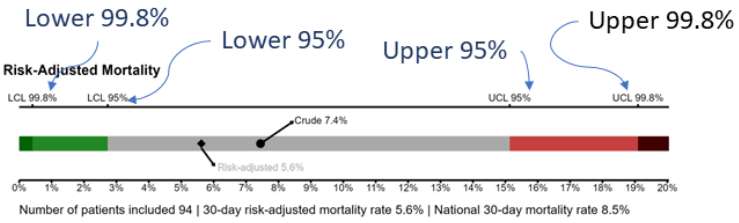


Overall performance



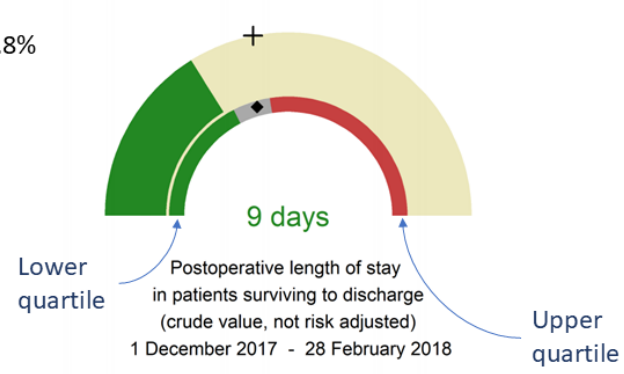
Risk-adjusted mortality

Rating boundaries are lower and upper 99.8% and 95% confidence limits



Non-risk-adjusted measures

Rating boundaries are lower and upper national quartiles



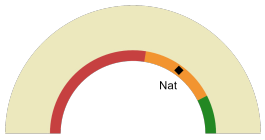
Monthly Report

Royal Victoria Hospital

2025-26 Reporting Period 11: 01 December 2025 - 28 Februrary 2026

These plots represent patients having an emergency laparotomy during Year 2025-26 Reporting Period 11 of NELA data collection. This version will be made publicly available via the NELA website. Feedback from participating hospitals is welcome.

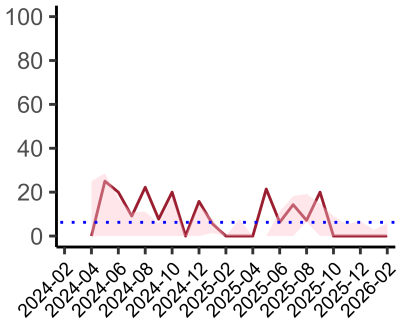
NELA process and outcome measures

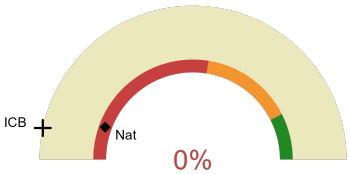


Estimated case ascertainment
01 December 2025 - 28 Februrary 2026

Estimated case ascertainment (Based on HES/PEDW Data)

Expected number of cases NA
Total cases entered 16
Cases locked 13
Cases unlocked 3

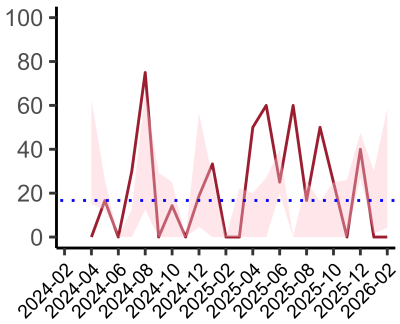


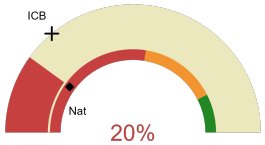


Proportion of patients who had a CT scan that was reported by a senior radiologist (ST3+) and communicated with the team in the correct time scale before surgery
01 December 2025 - 28 Februrary 2026

CT reported by a senior radiologist (ST3+) and communicated with the team in the correct time scale before surgery.

National mean 11%
ICB mean 7%
Number of patients included 13
Data completeness 100%

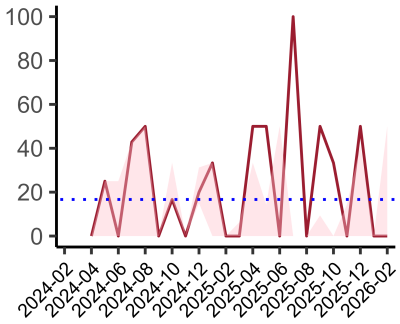


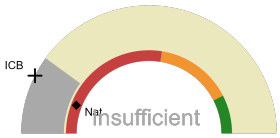


Proportion of patients with suspected sepsis or infection that have antibiotic administration within the correct clinical timeframe
01 December 2025 - 28 Februrary 2026

Combined Infection management standard - antibiotic administration within the correct clinical timeframe

National mean 20%
ICB mean 28%
Number of patients included 10
Data completeness 100%

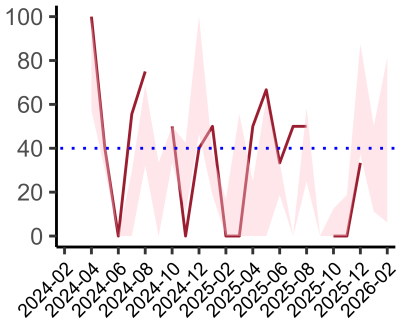


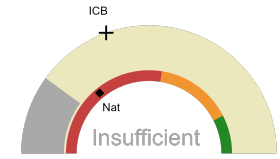


Proportion of patients with suspected sepsis and or septic shock that have antibiotic administration within the correct clinical timeframe
01 December 2025 - 28 Februrary 2026

Sepsis/septic shock - antibiotic administration within the correct clinical timeframe

National mean 12%
ICB mean 15%
Number of patients included 5
Data completeness 100%

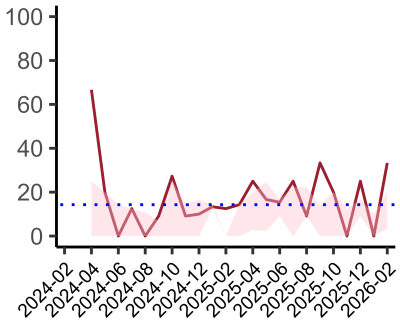


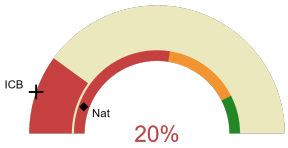


Proportion of patients with suspected infection that have antibiotic administration within the correct clinical timeframe
01 December 2025 - 28 Februrary 2026

Infection - antibiotic administration within the correct clinical timeframe

National mean 28%
ICB mean 39%
Number of patients included 5
Data completeness 50%

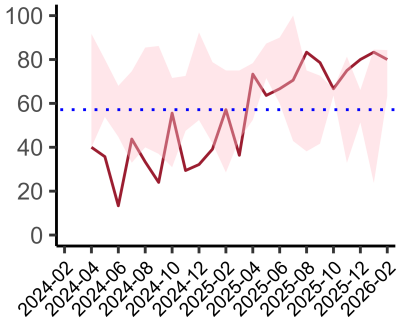


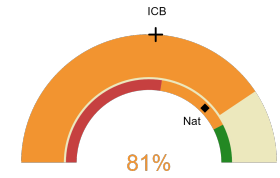


Proportion of non-elective, immediate surgery cases, arriving in theatre within 6 hours
01 December 2025 - 28 Februrary 2026

Non-elective, immediate surgery cases, arriving in threatre within 6 hours.

National mean 11%
ICB mean 11%
Number of patients included 10
Data completeness 100%

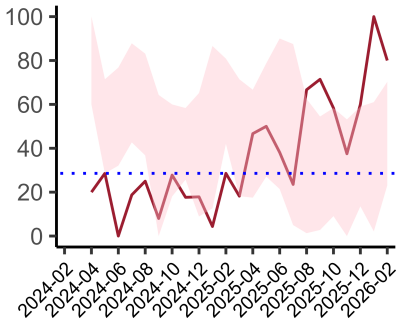


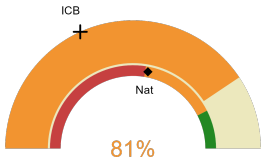


Risk of death documented before surgery
01 December 2025 - 28 Februrary 2026

Risk documented before surgery

National mean 75%
ICB mean 52%
Number of patients included 16
Data completeness 100%

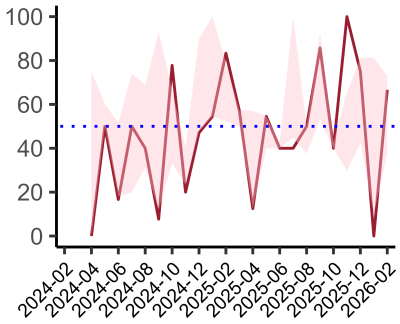


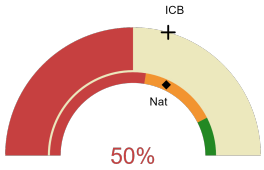


Risk of death documented after surgery
01 December 2025 - 28 Februrary 2026

Risk documented after surgery

National mean 56%
ICB mean 36%
Number of patients included 16
Data completeness 100%

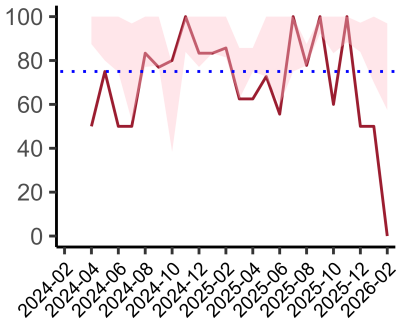


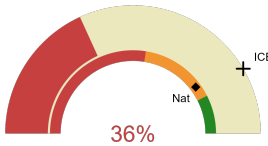


Admitted to critical care following surgery when the risk of death ≥ 5% (Excludes patients who died in theatre or with a decision to palliate)
01 December 2025 - 28 Februrary 2026

Admitted to Critical Care (risk of death ≥ 5%)

National mean 64%
ICB mean 59%
Number of patients included 10
Data completeness 100%

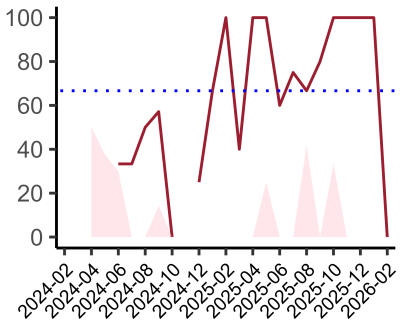


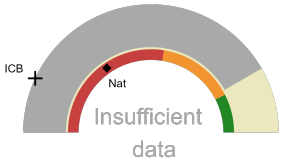


Consultant surgeon and anaesthetist present in theatre when risk of death ≥ 5%
01 December 2025 - 28 Februrary 2026

Consultant Anaesthetist & Consultant Surgeon in theatre (risk of death ≥ 5%)

National mean 80%
ICB mean 83%
Number of patients included 11
Data completeness 92%

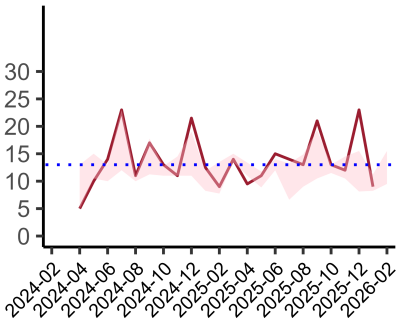


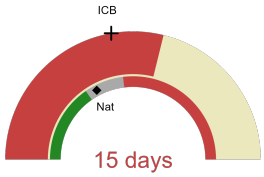


Perioperative assessment by a care of the older person specialist
01 December 2025 - 28 Februrary 2026

Perioperative Assessment by a member of the geriatrician-led multidisciplinary team for patient aged 65 or over and frail (CFS ≥ 5) or 80+

National mean 31%
ICB mean 14%
Number of patients included 6
Data completeness 100%

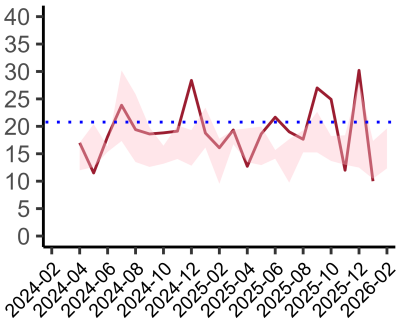


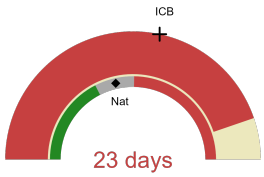


Median postoperative length of stay
in patients surviving to discharge
(crude value, not risk adjusted)
01 December 2025 - 28 Februrary 2026

Median postoperative length of stay

National median 9 days
ICB median 12 days
Number of patients included 11
Data completeness 100%



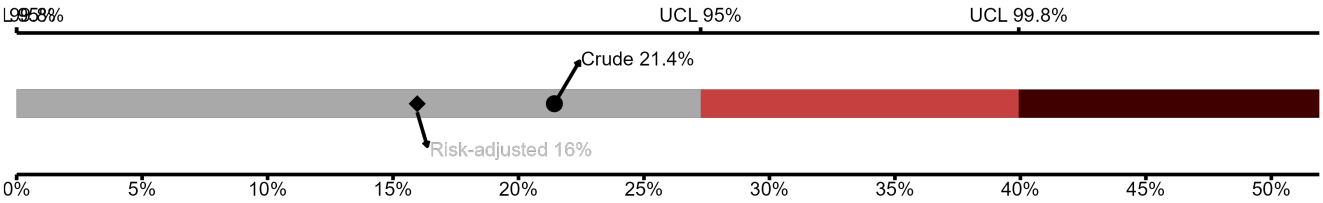


Mean postoperative length of stay
in patients surviving to discharge
(crude value, not risk adjusted)
01 December 2025 - 28 Februrary 2026

Mean postoperative length of stay

National mean 14 days
ICB mean 18 days
Number of patients included 11
Data completeness 100%

Risk-Adjusted Mortality



Number of patients included 14 | 30-day risk-adjusted mortality rate 16% | National 30-day mortality rate 7.1%

Integrated Care Board

Royal Victoria Hospital is part of the Northern Ireland ICB. This comprises Antrim Area Hospital, Altnagelvin Hospital, Causeway Hospital, Craigavon Area Hospital, Ulster hospital, Royal Victoria Hospital, Belfast City Hospital.
